Abstract

- This project aims to develop a web-based shopping system for an existing shop and subsequently deliver it as a web application using java.
- The primary objective of this project is to extend the benefits of online shopping to the customers of the physical store.
- It allows customers to purchase products from the
- shop conveniently using their Android devices via the internet, with the added convenience of home delivery from their favorite shop.
- This system can be customized for use in local stores or even for multinational branded shops with retailoutlet chains.
- By offering an online portal where customers can easily shop from anywhere, traditional shops can retain their customer base and compete with popular online marketplaces such as Flipkart or Amazon.

Introduction

- The web based Online Shopping System project mainly focuses on basic operating added new product, new member and updating new information, searching product and members and facility to online shopping .
- This system has three main modules.
- Inserting to database module - user friendly input screen
- Extracting from database module - attractive output screen
- search facility system - search for shopping

Project Objective :

- The objective of the project is to make a web application in Netbeans platform to purchase items in an existing shop using jsp.
- In order to build such an application complete web support needs to be provided. A complete and efficient web application which can provide the online shopping experience is the basic objective of the project

Project Scope :

- This system can be implemented to any shop in the locality or to multinational branded shops having retail outlet chains.
- The system recommends a facility to accept the orders 24*7 and a home delivery system which can make customers happy.
- If shops are providing an online portal where their customers can enjoy easy shopping from anywhere, the shops won't be losing any more customers to the trending online shops such as flipkart or ebay.
- Since the application is available in the Smartphone it is easily accessible and always available.

An illustration depicting various icons related to e-commerce and digital marketing. At the center is a tablet held by two hands, displaying a simplified online store interface with product thumbnails and a red 'BUY NOW' button. Surrounding the tablet are numerous floating icons: a shopping cart, a gift box, a credit card, a delivery truck, a clock, a shopping bag, a coin stack, a dollar bill, a sale sign, shopping bags, a smartphone, a laptop, a document, and a magnifying glass. The entire scene is set against a light blue background with faint dotted lines connecting some of the elements.

-

Frontend design :

JSP, HTML, CSS are utilized to implement the frontend.

Database design :

Databases are the storehouses of data used in the software systems.

The data is stored

in tables inside the database. Several tables are created for the manipulation of the

data for the system. Two essential settings for a database are

- **Primary Key - the field that is unique for all the record occurrences.**
- **Foreign Key - the field used to set relations between tables.**

Normalization is a technique to avoid redundancy in the tables.

Modules

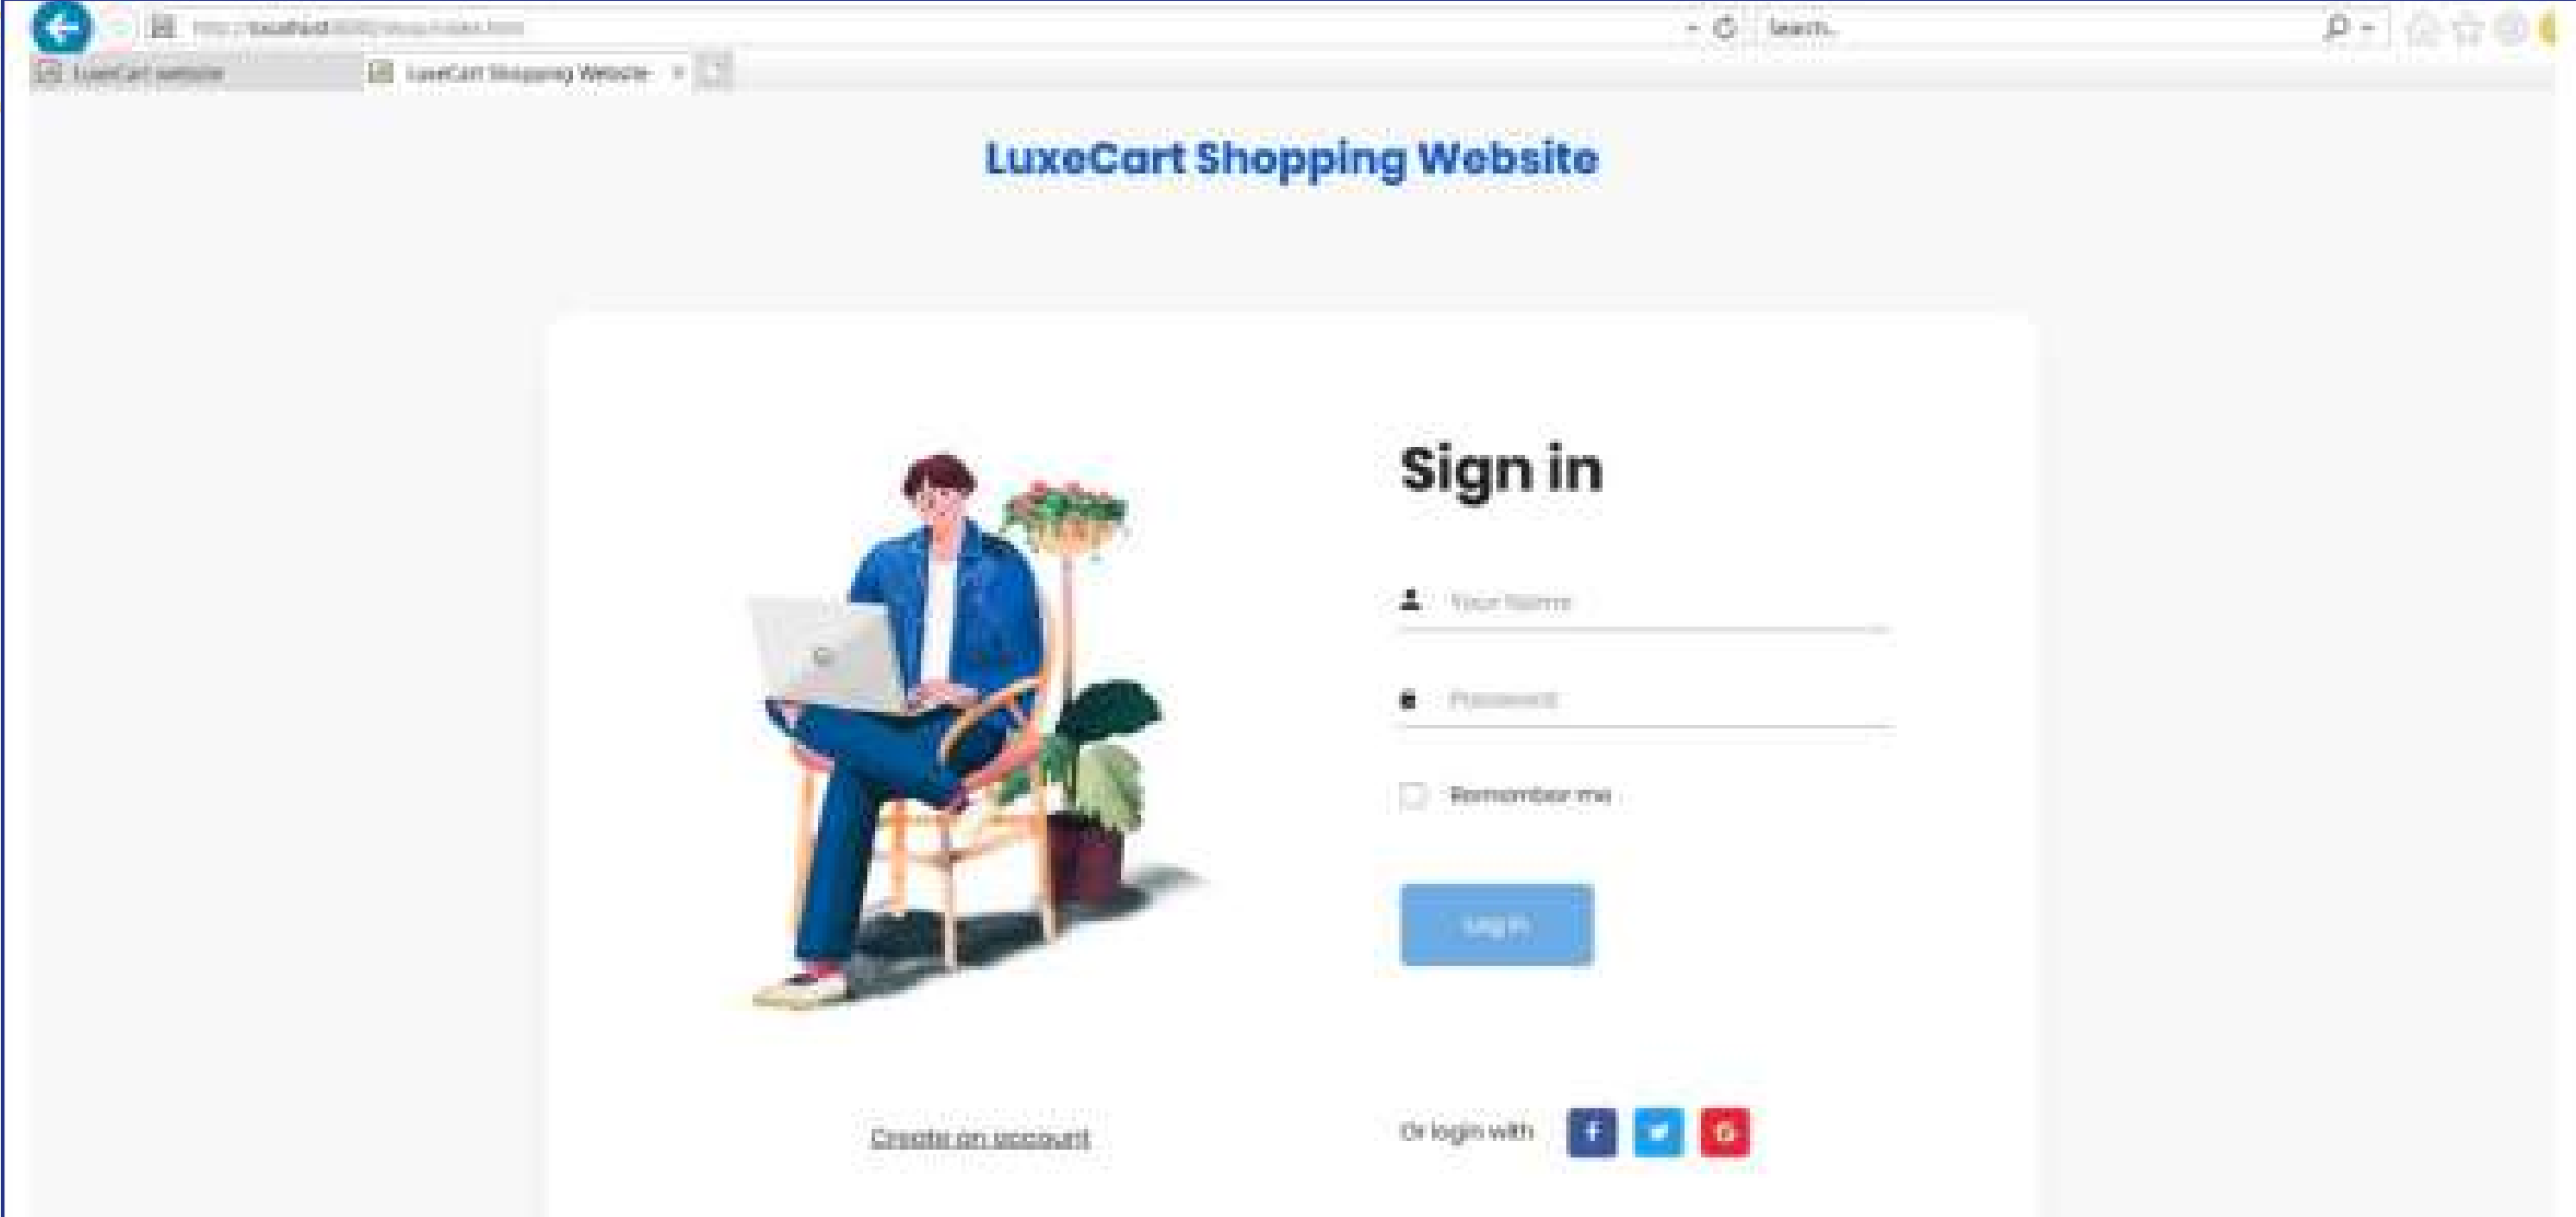

The modules present in the project include the following

- **Login module**
- **Signup module**
- **Dashboard**
- **Products**
- **Add to Cart**
- **Order**

Screenshots

Sign in Page :

The screenshot displays the 'Sign in' page of the LuxeCart Shopping Website. The page features a light gray background with a central white content area. On the left side of the content area, there is an illustration of a person sitting in a wooden chair, using a laptop, with a potted plant next to them. To the right of the illustration, the heading 'Sign in' is prominently displayed. Below the heading, there are two input fields: 'Your Name' and 'Password', each with a small icon to its left. A checkbox labeled 'Remember me' is positioned below the password field. A blue 'Log In' button is located below the checkbox. At the bottom left of the content area, there is a link that says 'Create an account'. At the bottom right, there is a section labeled 'Or login with' followed by three social media icons: Facebook, Twitter, and Google+.

Order Status :

The screenshot shows a web browser window with the address bar displaying a local URL. The page title is 'Order Confirmation'. The website logo 'LUXECART' is on the left, and a navigation menu with links 'HOME', 'COLLECTION', 'SPECIALS', 'BLOGS', 'ABOUT US', 'POPULAR', and 'PRODUCTS' is on the right. Below the navigation bar, there is a large empty space. At the bottom, under the heading 'Order Status', there is a table with two rows of order data.

Product name	Price	Status	Delivery Date
Checked Shirt	588	ORDER CONFIRMED	2023-09-22
o-Shirt	812	ORDER CONFIRMED	2023-09-22

Database Table

A table is created for storing the user details. It stores the username, password, mobile number, and email id of the users.

[illegible]

Conclusion :

- The project entitled Online shopping system was completed successfully. The system has been developed with much care and free of errors and at the same time it is efficient and less time consuming.
- The purpose of this project was to develop a web application and an android application for purchasing items from a shop.
- This project helped us in gaining valuable information and practical knowledge on several topics like designing web pages using html & css, usage of responsive templates, designing of android applications, and management of databases using mysql.
- The entire system is secured. Also the project helped us understand about the development phases of a project and software development life cycle.
- We learned how to test different features of a project. System may keep track of the history of purchases of each customer and provide suggestions based on their history.
- These features could have been implemented unless time did not limit us.
